

ABSTRACT

In a liquid crystal display device according to the present invention, a contact holding portion (10s) which contacts a light guiding plate (3) is provided on a housing (10), and, at least either of the contact holding portion (10s) of the housing (10) and a portion (3b) of the light guiding plate (3) corresponding to the contact holding portion of the housing has a processed surface SA formed by a process such as texturing for increasing roughness degree thereof. And, lubricating grease is applied to at least either of the contact holding portion (10s) of the housing (10) and the portion (3b) of the light guiding plate (3) corresponding to the contact holding portion of the housing.
